1. (8 points) Study the continuity of the following function:

$$f(x) = \begin{cases} \frac{\ln(1-x), & \text{if } x \in (-\infty; 0]; \\ \frac{\sqrt{13-4x-3}}{1-\sqrt{x}}, & \text{if } x \in (0; 13/4] \setminus \{1\}; \\ \frac{12}{13-4x}, & \text{if } x \in (13/4; +\infty) \cup \{1\}. \end{cases}$$

2. (3+3 points) Consider the function :

$$f(x) := \cos^3(x) + \frac{1}{x} \quad (x > 0).$$

- a) Prove that the equation f(x) = 0 has at least one solution on the given domain of definition.
- b) Give the equation of the tangent line to the graph of f at the point $a = \pi$.
- **3.** (6 points) Evaluate the following limit:

$$\lim_{x \to 0} \left(\cos(2x)\right)^{1/\tan(x)}.$$

4. (8 points) Evaluate the second order Taylor polynomial at a=0 for the function :

$$f(x) := \sqrt{2x+1} \quad (x > -1/2),$$

and estimate the error of this approximation on the interval (-1/4; +1/4).

5. (12 points) Discuss the following function and sketch its graph:

$$f(x) := (x-5) \cdot e^x \quad (x \in \mathbb{R}).$$

Analysis-2, Test 3 from Part 1, 19. December 2019.

1. (8 points) Study the continuity of the following function:

$$f(x) = \begin{cases} \frac{\ln(1-x), & \text{if } x \in (-\infty; 0]; \\ \frac{\sqrt{13-4x-3}}{1-\sqrt{x}}, & \text{if } x \in (0; 13/4] \setminus \{1\}; \\ \frac{12}{13-4x}, & \text{if } x \in (13/4; +\infty) \cup \{1\}. \end{cases}$$

2. (3+3 points) Consider the function :

$$f(x) := \cos^3(x) + \frac{1}{x} \quad (x > 0).$$

- a) Prove that the equation f(x) = 0 has at least one solution on the given domain of definition.
- b) Give the equation of the tangent line to the graph of f at the point $a = \pi$.
- **3.** (6 points) Evaluate the following limit:

$$\lim_{x \to 0} \left(\cos(2x)\right)^{1/\tan(x)}.$$

4. (8 points) Evaluate the second order Taylor polynomial at a = 0 for the function :

$$f(x) := \sqrt{2x+1} \quad (x > -1/2),$$

and estimate the error of this approximation on the interval (-1/4; +1/4).

5. (12 points) Discuss the following function and sketch its graph:

$$f(x) := (x-5) \cdot e^x \quad (x \in \mathbb{R}).$$
